1) What is the scientific method?

2) What is a hypothesis?

3) What does it mean to be an expert witness?

4) What is an observation?

5) What is Forensics?

6) Where is a crime scene?

7) What method did Goddard develop?

8) What process did Galton discover for identifying people?
9) Who developed the process of measuring a series body lengths to create an identity of a person?

10) What is Locard’s Exchange Principle?

11) Why was Orfila called he father of modern toxicology?

12) Who developed a way to identify dried blood?

13) What does blood type mean?

14) What does a forensic anthropologist do at a crime scene?

15) What does an Entomologist do to determine time of death of a body?

16) What does an Odontologist use to determine the identity of a body?
17) Toxicologists look for what in a victim?

18) Who performs autopsies to determine time and cause of death?

19) Who examines structural damage to a crime scene to determine cause?
1) What is the scientific method?

2) What is a hypothesis?

3) What does it mean to be an expert witness?

4) What is an observation?

5) What is Forensics?

6) Where is a crime scene?

7) What method did Goddard develop?

8) What process did Galton discover for identifying people?
9) Who developed the process of measuring a series of body lengths to create an identity of a person?

10) What is Locard’s Exchange Principle?

11) Why was Orfila called the father of modern toxicology?

12) Who developed a way to identify dried blood?

13) What does blood type mean?

14) What does a forensic anthropologist do at a crime scene?

15) What does an Entomologist do to determine time of death of a body?

16) What does an Odontologist use to determine the identity of a body?
17) Toxicologists look for what in a victim?

18) Who performs autopsies to determine time and cause of death?

19) Who examines structural damage to a crime scene to determine cause?
1) What is the scientific method?

2) What is a hypothesis?

3) What does it mean to be an expert witness?

10) What is Locard’s Exchange Principle?

11) Why was Orfila called the father of modern toxicology?

12) Who developed a way to identify dried blood?

13) What does blood type mean?

14) What does a forensic anthropologist do at a crime scene?

15) What does an Entomologist do to determine time of death of a body?

16) What does an Odontologist use to determine the identity of a body?
17) Toxicologists look for what in a victim?

18) Who performs autopsies to determine time and cause of death?

19) Who examines structural damage to a crime scene to determine cause?
1) What is the scientific method?

2) What is a hypothesis?

3) What does it mean to be an expert witness?

4) What is an observation?

5) What is Forensics?

6) Where is a crime scene?

7) What method did Goddard develop?

8) What process did Galton discover for identifying people?
9) Who developed the process of measuring a series body lengths to create an identity of a person?

10) What is Locard’s Exchange Principle?

11) Why was Orfila called he father of modern toxicology?

12) Who developed a way to identify dried blood?

13) What does blood type mean?

14) What does a forensic anthropologist do at a crime scene?

15) What does an Entomologist do to determine time of death of a body?

16) What does an Odontologist use to determine the identity of a body?
17) Toxicologists look for what in a victim?

18) Who performs autopsies to determine time and cause of death?

19) Who examines structural damage to a crime scene to determine cause?
1) What is the scientific method?

2) What is a hypothesis?

3) What does it mean to be an expert witness?

4) What is an observation?

5) What is Forensics?

6) Where is a crime scene?

7) What method did Goddard develop?

8) What process did Galton discover for identifying people?
9) Who developed the process of measuring a series body lengths to create an identity of a person?

10) What is Locard’s Exchange Principle?

11) Why was Orfila called he father of modern toxicology?

12) Who developed a way to identify dried blood?

13) What does blood type mean?

14) What does a forensic anthropologist do at a crime scene?

15) What does an Entomologist do to determine time of death of a body?

16) What does an Odontologist use to determine the identity of a body?
17) Toxicologists look for what in a victim?

18) Who performs autopsies to determine time and cause of death?

19) Who examines structural damage to a crime scene to determine cause?
1) What is the scientific method?
